

Nexora Tech Inc. — Senior Backend & AI Engineer

Location: Remote / Hybrid | Department: Engineering | Type: Full-time

Role Overview

We are seeking a seasoned Senior Backend & AI Engineer to build scalable microservices and integrate generative AI and machine learning workflows into our high-performance cloud platform.

Minimum Requirements (Must Have)

- 4+ years of professional backend development with Python.
- Production expertise building asynchronous microservices with FastAPI.
- Strong experience designing relational database schemas and complex queries in SQL / PostgreSQL.
- Deep understanding of REST APIs architecture, OpenAPI standards, and high-concurrency design.
- Hands-on production experience containerizing and deploying services with Docker.
- Practical experience with Machine Learning / PyTorch for model inference and evaluation.

Preferred Qualifications (Nice to Have)

- Experience with Kubernetes orchestration and cloud deployment on AWS.
- Exposure to Redis caching, message queues, and CI/CD pipelines.
- Familiarity with modern frontend integration (React or TypeScript).
